

Simple Document

This is a simple Markdown document to test the basic functionality of our Markdown to PDF converter.

Introduction

The tool converts Markdown to PDF with LaTeX-like typography. It supports:

- Headers (H1 through H6)
- Paragraphs with proper spacing
- Bold text
- Italic text

`inline code`

Code Blocks

Here's an example of a code block:

```
fn main() {  
    println!("Hello, world!");  
}
```

Lists

Here's a bulleted list:

- First item
- Second item
 - Nested item
 - Another nested item
- Third item

And a numbered list:

- First step
- Second step
- Third step

Conclusion

This simple test document demonstrates the basic features of the Markdown to PDF tool. The typography should be clean and professional, similar to LaTeX output.
